

8th International Conference on FASD

Brain structural connectome alterations in children and youth with prenatal alcohol exposure

Xiangyu Long
University of Calgary
March 7th, 2019

No conflict of interest

No potential bias

University of Calgary:
Dr. Catherine Lebel
Bryce Geeraert

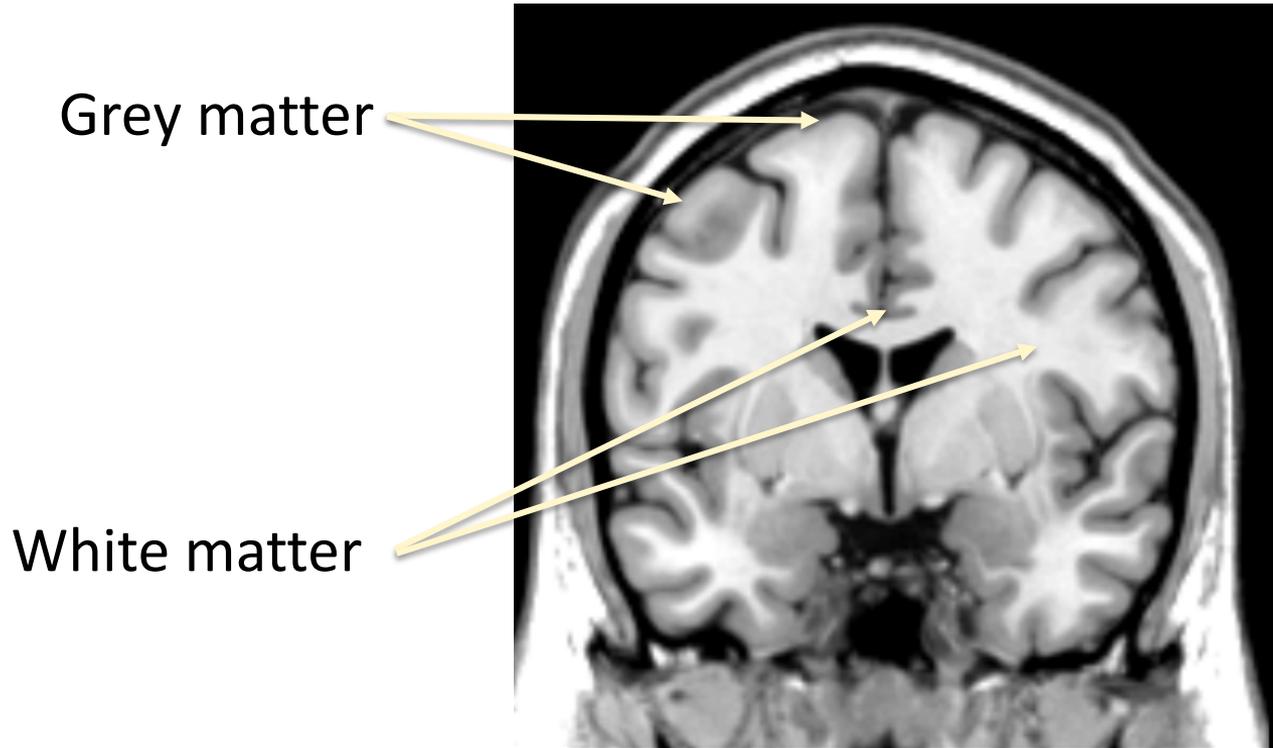

University of Alberta:
Dr. Christian Beaulieu
Graham Little
Dr. Sarah Treit
Dr. Dongming Zhou

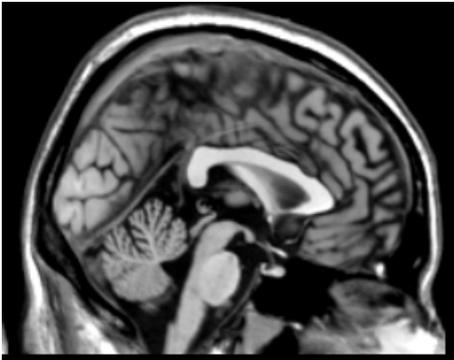

- Get basic concepts about brain structural connectome analysis
- Identify brain areas where structure is altered in individuals with PAE

- Background
- Material & Methods
- Results
- Conclusions
- Future plans

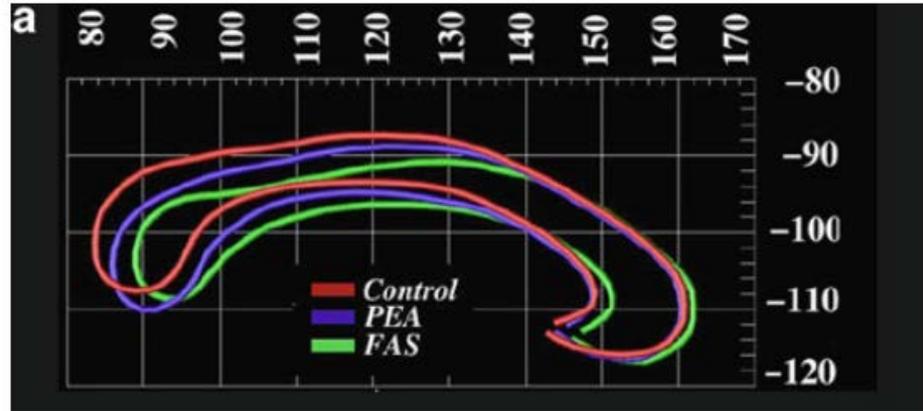

- What are human brain structures?

- PAE and white matter
- Abnormal corpus callosum

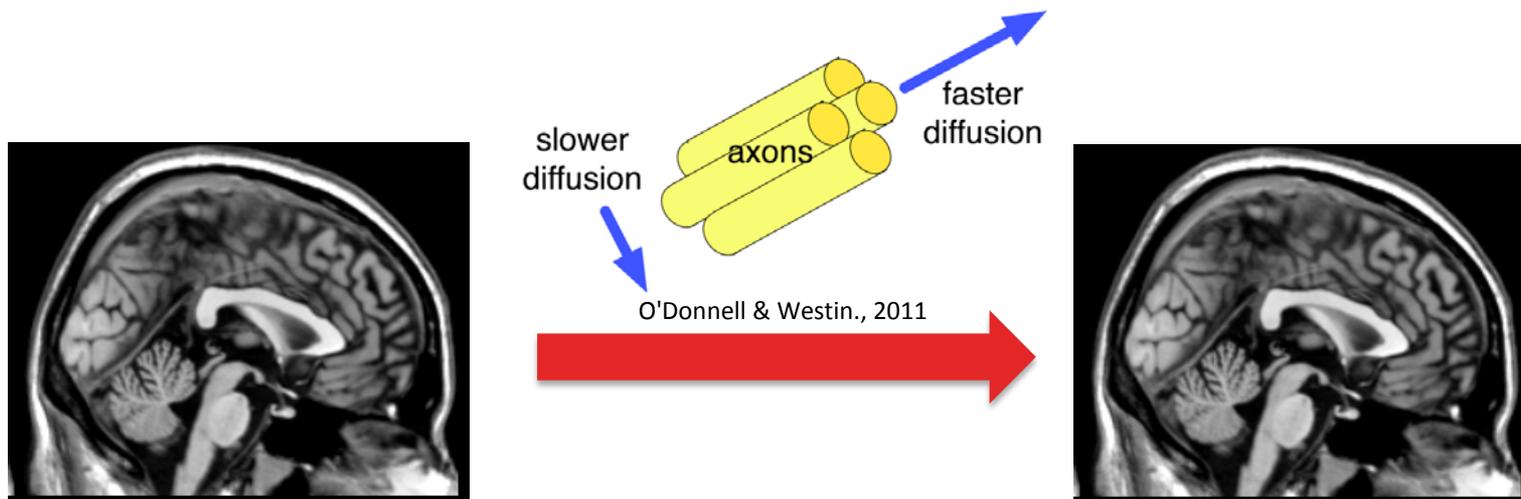

Unexposed

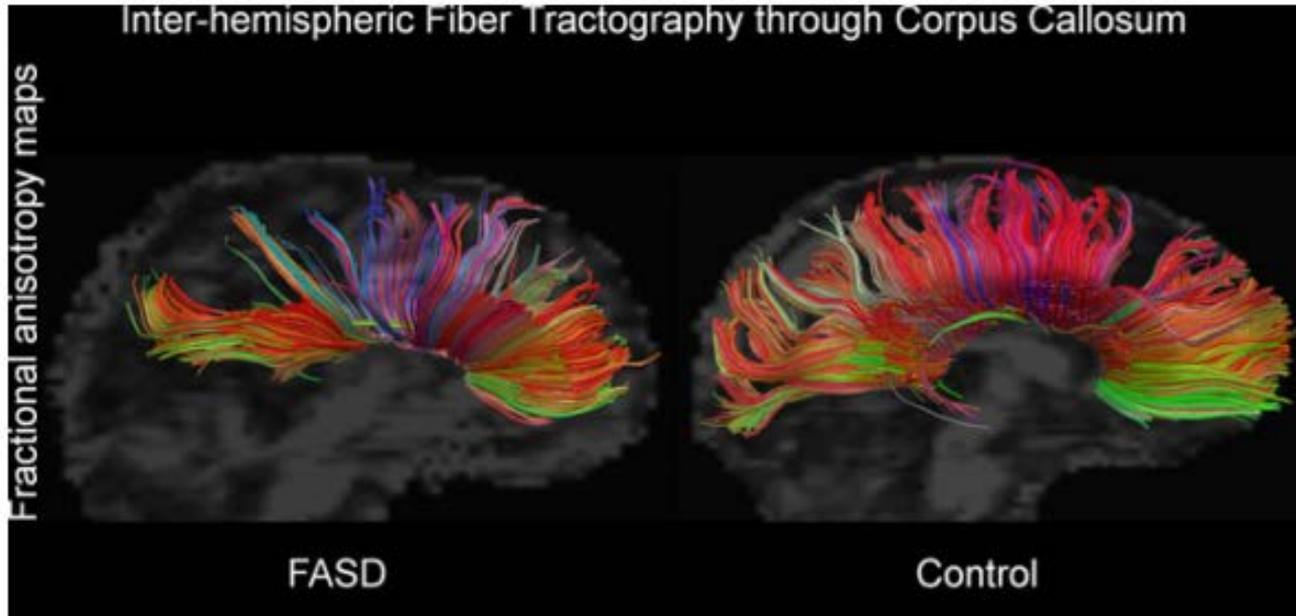

Sowell et al., 2001

- Diffusion tensor imaging

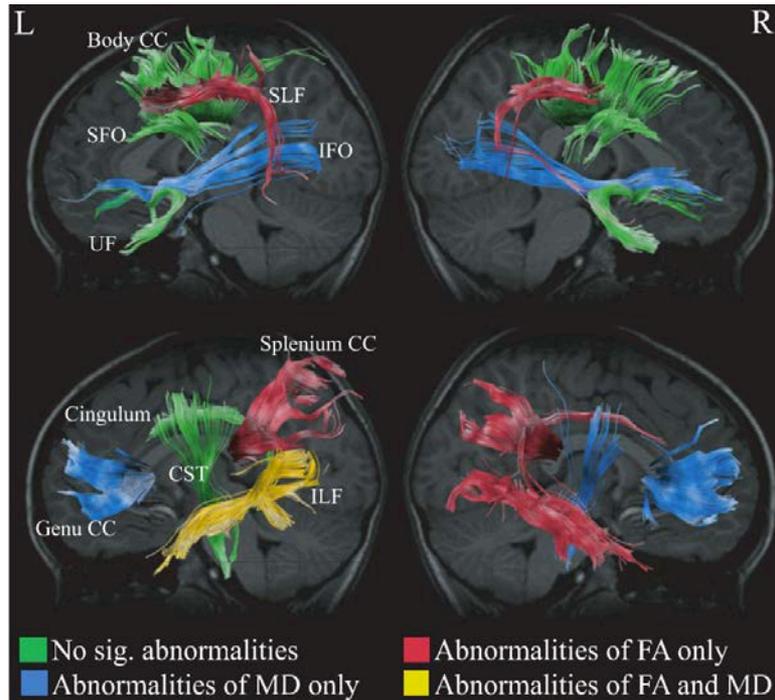

- Abnormal white matter fibers through the corpus callosum:

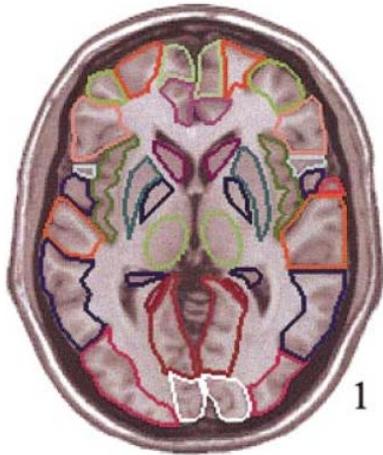

Wozniak et al., 2011

- Abnormal white matter anisotropy across the whole brain

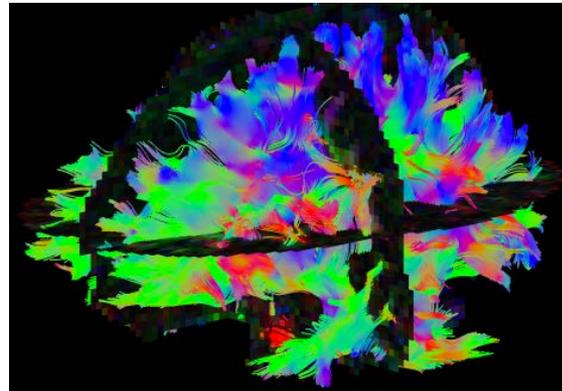

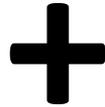

Lebel et al., 2008

- Graph theory based analysis:

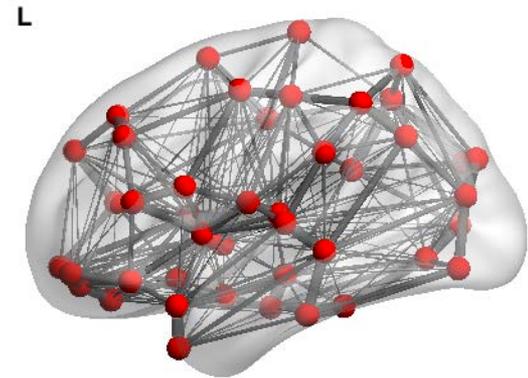

Brain regions

Tzourio-Mazoyer., 2002

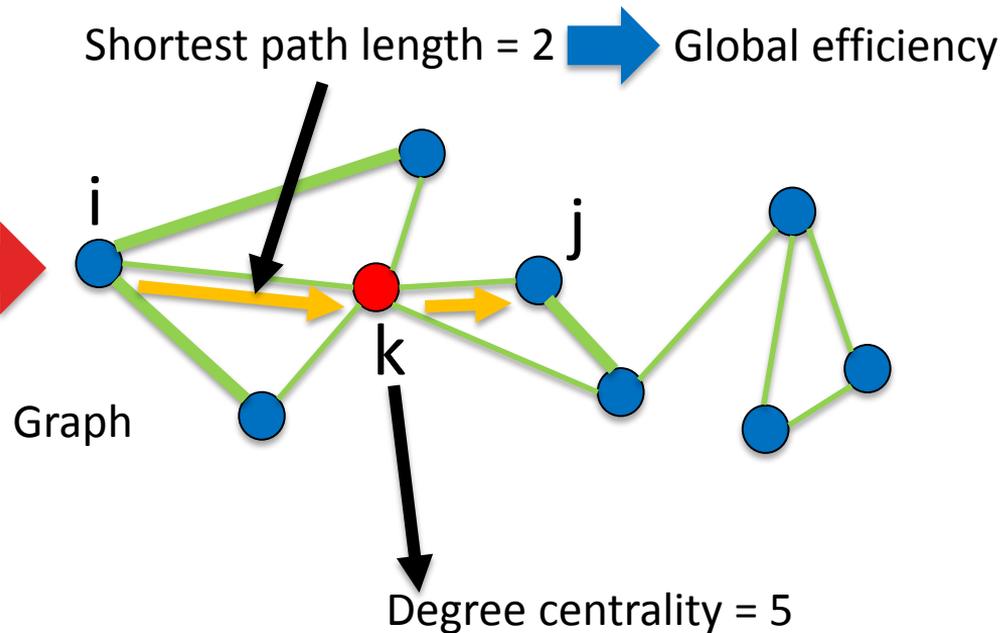

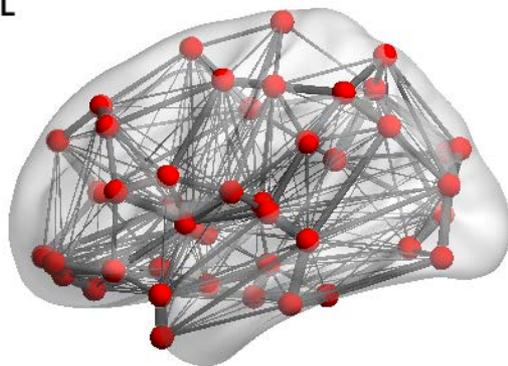

White matter tractography

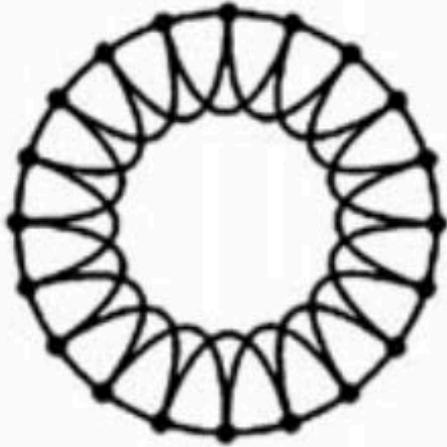

Structural connectome

L

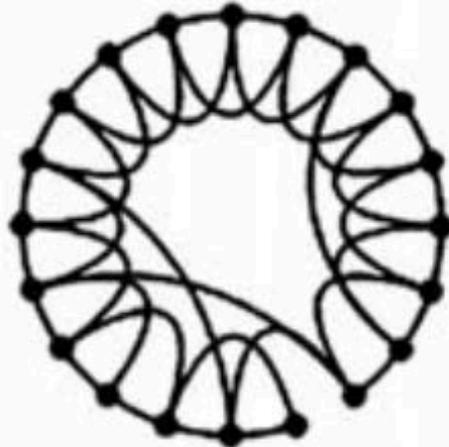

- Small world: High local connectivity and low shortest path length.

Regular

Small-World

Random

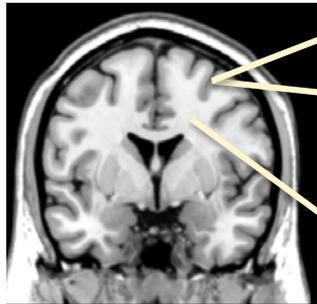

Watts & Strogatz., 1998

Global Functional Connectivity Abnormalities in Children with Fetal Alcohol Spectrum Disorders

Jeffrey R. Wozniak, Bryon A. Mueller, Christopher J. Bell, Ryan L. Muetzel,
Heather L. Hoecker, Christopher J. Boys, and Kelvin O. Lim

Functional connectivity abnormalities and associated cognitive deficits in fetal alcohol Spectrum disorders (FASD)

Jeffrey R. Wozniak¹ · Bryon A. Mueller¹ · Sarah N. Mattson³ · Claire D. Coles⁴ ·
Julie A. Kable⁴ · Kenneth L. Jones⁵ · Christopher J. Boys¹ · Kelvin O. Lim¹ ·
Edward P. Riley³ · Elizabeth R. Sowell² · the CIFASD

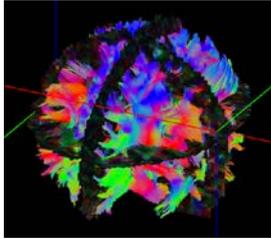

- Aim: Structural connectome in children and youth with PAE

103 Unexposed controls, 97 PAE;
5 ~ 18 years old, 83 females
Diffusion tensor imaging

DTI datasets

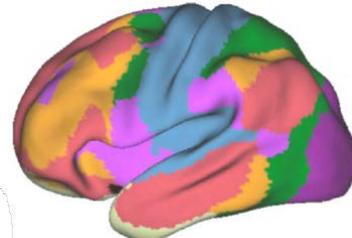

deterministic
tractography

Whole brain tractography

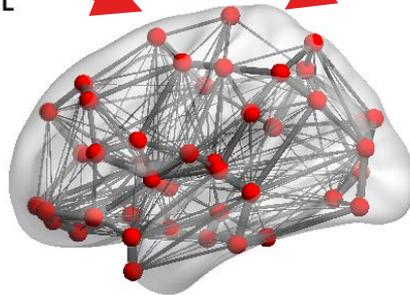

Brain regions

Yeo et al., 2011

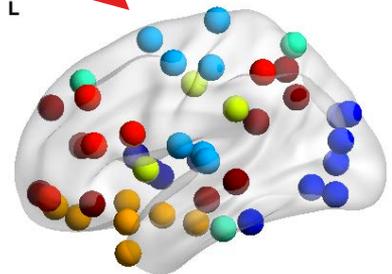

- Purple (Visual)
- Blue (Somatomotor)
- Green (Dorsal Attention)
- Violet (Ventral Attention)
- Cream (Limbic)
- Orange (Frontoparietal)
- Red (Default)

L

Structural connectome

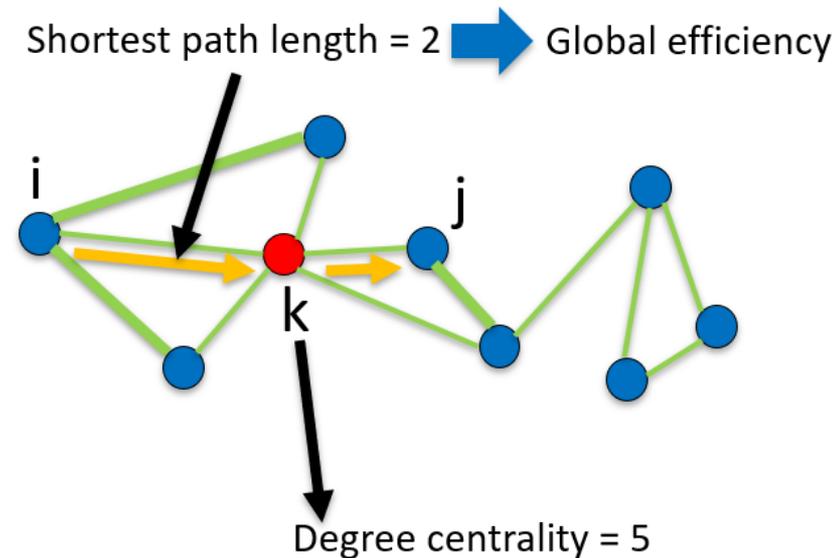

L

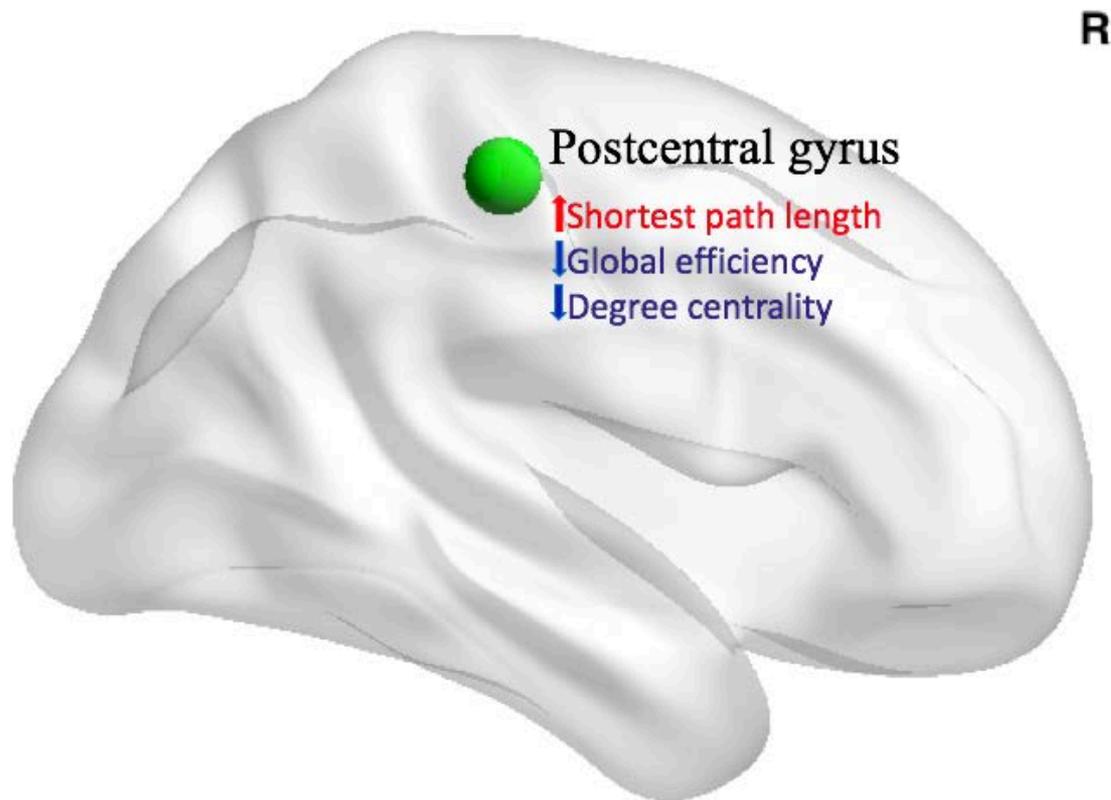

Pre-defined networks

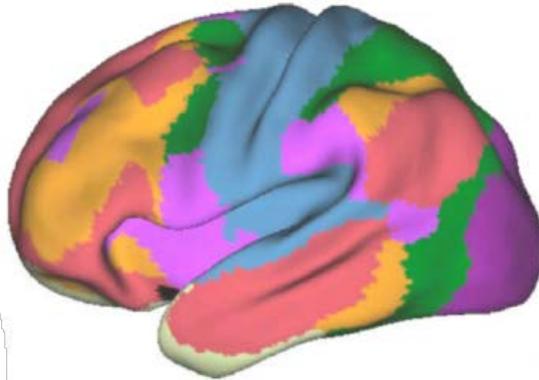

Graph theoretical analysis

- Children and youth with PAE:
 - Higher shortest path length;
 - Lower global efficiency;
 - Lower degree centrality;
 - Nearly Small-world;

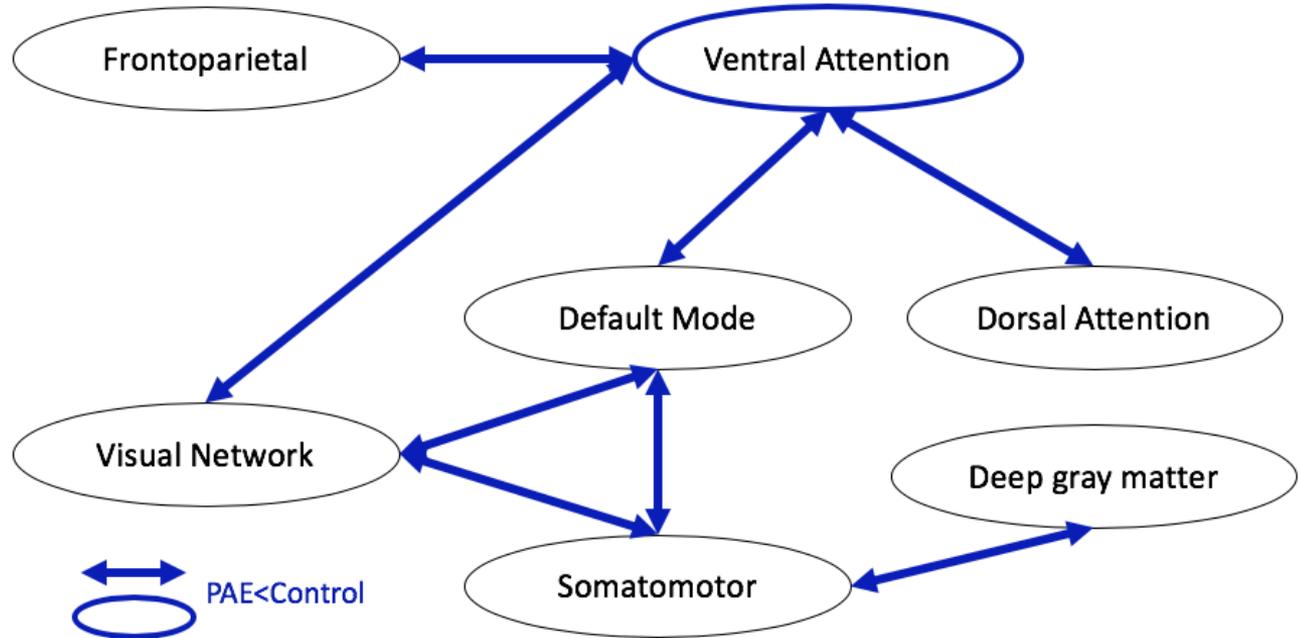

Red: PAE > Controls; Blue: PAE < Controls

-  Purple (Visual)
-  Blue (Somatomotor)
-  Green (Dorsal Attention)
-  Violet (Ventral Attention)
-  Cream (Limbic)
-  Orange (Frontoparietal)
-  Red (Default)

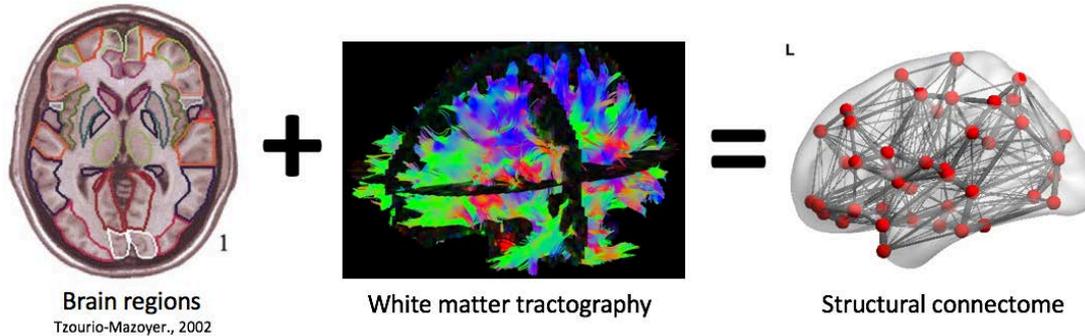

Yeo et al., 2011

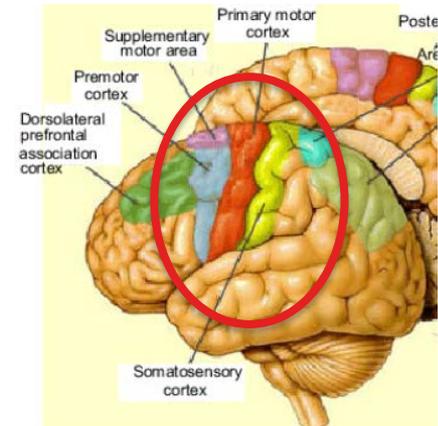

- Structural network in children and youth with PAE requires longer path to transfer information, lead to decreased efficiency;
- Brain regions related to sensorimotor functions at the right hemisphere dominate the changes;
- Disrupted cooperations between cognitive, sensorimotor and attention system associated with PAE.

- Relationship with cognitive and behavioural outcomes;
- Interactions between brain functions and structures;

- Get basic concepts about brain structural connectome analysis:

- Identify brain areas where structure is altered in individuals with PAE

Thank you for listening!
